Expanding Your Solutions

Viper-X Product Catalog

High Performance Interior Non-Load Bearing Wall Framing

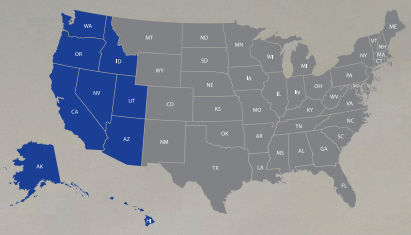
Effective 02/20/2024

Viper-X is the solution you've been waiting for:

BIGGER, BETTER, STRONGER!

YOU demand a better product, we DELIVER!

Available in:
Alaska, Arizona, California, Hawaii, Idaho, Nevada, Oregon, Utah, and Washington



Code Information

Viper-X Drywall Framing has been verified by the following IAS Accredited Test Agencies and/or certified by the Product Evaluation Agencies listed here.

IBC/IRC 2012/2015 Compliant

The physical properties and web crippling load capacity in this catalog are recognized in IAPMO ER-0524 report. The values for the composite (pending) and non composite fully braced and 48"oc braced limiting heights in this catalog are for the members recognized in our IAPMO ER-0524 report. Please see the full versions of these reports at **www.cemcosteel.com.**

A Track Record You Can Count On, Verified Code Compliant

Viper-X Drywall Framing System is tested or conforms to these standards:

- **AISI S100** North American Specification for the Design of Cold-Formed Steel Structural Members, 2012.
- **AISI S240** North American Standard for Cold-Formed Steel Framing—Non-Structural Members.
- **ASTM A1003** Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic Coated for Cold-Formed Framing Members.
- **ASTM A653/A653M** Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
- **ASTM C754** Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
- **ASTM E90** Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
- **ASTM E119** Standard Test Methods for Fire Tests of Building construction and Materials. Fire rated for 1, 2, 3, and 4 hour rated walls.
- **ASTM E72** Standard Test Methods of Conducting Strength Tests of Panels for Building Construction.
- **ASTM C1629** Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels.

Viper-X is listed in the following:

- IAPMO ER-0524

IAPMO Code Compliant

The Viper-X products manufactured by CEMCO are currently under review at IAPMO-UES, providing evidence that the Viper-X Drywall Framing System meets code requirements. Building officials, architects, contractors, specifiers, designers and others utilize this Evaluation Report to provide a basis for using or approving metal framing in construction projects following the International Building Code.

LEED v4 for Building & Design Construction

- MR Prerequisite: Construction and Demolition Waste Management Planning.
- MR Credit: Construction and Demolition Waste Management.
- MR Credit: Building Product Disclosure and Optimization—Sourcing of Raw Materials, Option 2.
- MR Credit: Building Product Disclosure and Optimization—Material Ingredients, Option 1.
- MR Credit: Building Life-Cycle Impact Reduction, Option 4.

Recycled Content

- Total Recycled Content: 36.9%
- Post-Consumer: 19.8%
- Pre-Consumer: 14.4%

California's Proposition 65 Warning

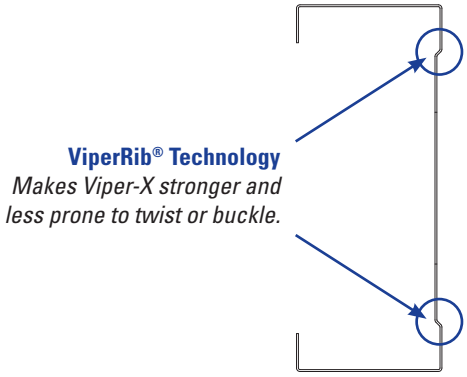
California's Safe Drinking Water and Toxic Enforcement Act of 1986 – commonly referred to as Proposition 65 ("Prop 65") (27 Cal. Code Reg.§ 25600, et seq.) – has recently changed, requiring manufacturers to provide a warning based on its knowledge about the presence of one or more of the almost 900 listed chemicals which are known to the State of California to cause cancer and birth defects, or other reproductive harm With a few exceptions, manufacturers operating in the state of California as well as those entities who distribute, import, package, and/or supply products into the State of California are now required provide a "clear and reasonable" warning to consumers that their products may contain one or more of these listed chemicals or compounds. The complete list is available at **www.P65Warnings.ca.gov**.

In compliance with the new requirements, we are notifying each of our customers that CEMCO products contain Nickel (metallic) and/or other chemicals listed which are known to the State of California to cause cancer and birth defects or other reproductive harm. Safety data sheets from our major suppliers are available from CEMCO on our website at **www.cemcosteel.com**.

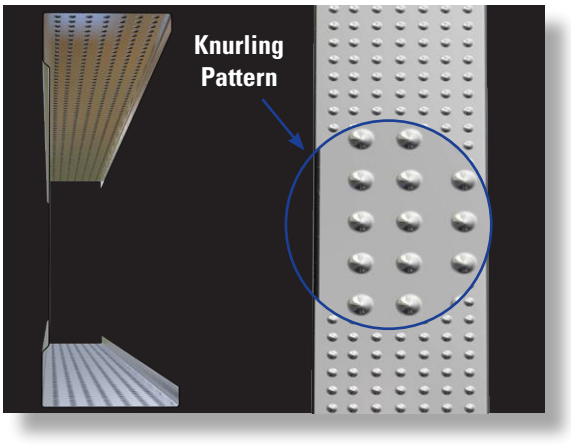
A High Performance, Safety Edged™ Flat Steel Drywall Framing System

CEMCO's newest product offering for interior non-load bearing wall framing; Viper-X!

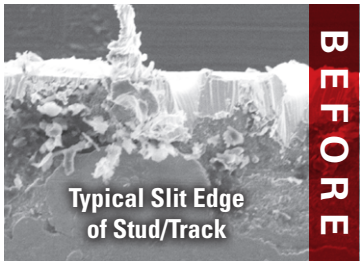
- 15% MORE STEEL in each flange (when compared to a typical interior non-load bearing stud).
- No Ribs, Flutes, Channels, Dimples, Pylons, Pyramids, or other unique facets on the flange.
- Higher limiting heights due to MORE STEEL in each stud.
- MORE STEEL equals BIGGER, BETTER, STRONGER!
- All Viper-X studs and tracks are Safety Edged™
- Fully tested wall assemblies.
- Available in Alaska, Arizona, California, Hawaii, Idaho, Nevada, Oregon, Utah, and Washington.
- Complete typical details, BIM REVIT files.
- Fully 100% LEED v4 applicable.
- Made from the same high quality hot-dipped galvanized PRIME steel CEMCO has been supplying for over 40 years.

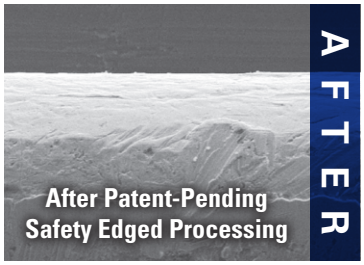


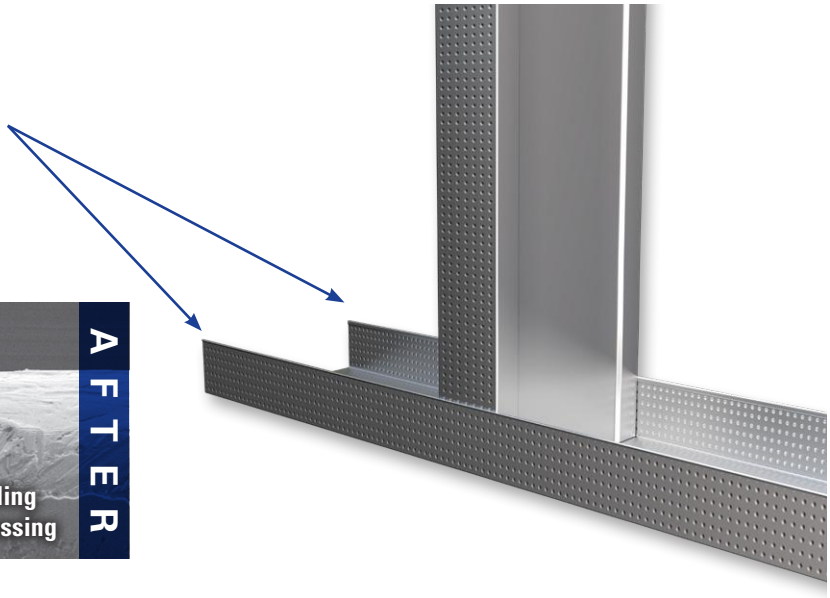
ViperRib® Technology
Makes Viper-X stronger and less prone to twist or buckle.



SAFETY EDGED™ BY CEMCO







For more information, please contact CEMCO's Technical Service Department at 800-416-2278.

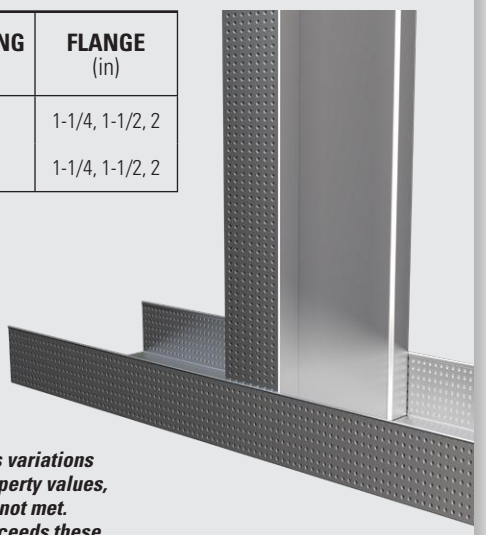
Viper-X Track®

MODEL NO.	DESIGN THICKNESS (in)	MINIMUM THICKNESS (in)	YIELD (ksi)	WEB SIZES (in)	COATING [1,2]	FLANGE (in)
VIPER-X-18 TRACK	0.0188	0.0179	57	1-5/8, 2-1/2, 3-1/2, 3-5/8, 4, 6	G40	1-1/4, 1-1/2, 2
VIPER-X-22 TRACK	0.0235	0.0223	57	1-5/8, 2-1/2, 3-1/2, 3-5/8, 4, 6	G40	1-1/4, 1-1/2, 2



Notes:

1. *Web height to thickness ratio (h/t) exceeds 200. Web stiffeners required at all support points and concentrated loads.*
2. *Members having a web height to thickness ratio (h/t) value exceeding 260 will not have effective properties listed, only gross properties will be listed.*
3. *Web height value (h) used for h/t calculation is the flat width of the web. For (S) members, this is the out to out member size, minus twice the thickness, minus twice the inside bend radius.*
4. *Members having a flange width to thickness ratio (b/t) value exceeding 60 must be considered for use with the limitations described in AISI S100.*
5. *Flange width value (b) used for b/t calculation is the flat width of the flange. For (S) members, this is the out to out member size, minus twice the thickness, minus twice the inside bend radius.*
6. *Per ASTM C645 & ASTM A1003 Table 1.*
7. *G60 and G90 available upon request.*

Viper-X High Performance Studs and Tracks are in compliance with ASTM C645. ASTM C645 Section 5.1 allows for permissible dimensional thickness variations, Section 8.2 allows for thickness variations and exemptions from minimum section property values, if specified performance requirements are not met. The Viper-X Framing product meets and exceeds these requirements.

GENERAL TABLE NOTES

1. The yield strength for all Viper-X Products is 57 ksi.
2. Tabulated gross properties are based on full, unreduced section away from punchouts.
3. Punch-out sizes are 0.75" x 2.00" for stud depths 1.625" and 2.50", and 1.50" x 2.75" for stud depths 3.50" and deeper.
4. Factory punchouts are in accordance with section C5 of AISI S201-12. The distance from the center of the last punchout to the end of the stud is 12 inches.
5. For Allowable Stress Design (ASD) method, factors of safety of 1.67 and 1.6 respectively, are used for moment and shear capacities as per AISI S100.
6. Design stiffening lip is 3/8" for all studs.

Notations

Ix	Moment of Inertia about the X axis of Gross Section
Iy	Moment of Inertia about the Y axis of Gross Section
Rx, Ry	Radius of Gyration about the X and Y axes, respectively of Gross Section
J	St. Venant Torsion Constant
Cw	Torsional Warping Constant
Xo	Distance from Shear Center to Centroid Along the X axis
Ro	Polar Radius of Gyration about the Shear Center
ß	Torsional-Flexural Constant
Ixe	Effective Moment of Inertia at Punch-out about the X axis (for deflection calculation)
Sxe	Effective Section Modulus about the X axis at Punch-out
Ma-l	Allowable Moment based on Local Buckling
Ma-d	Allowable Moment based on Distortional Buckling
Vag	Allowable Shear at Gross Section

For more information, please contact CEMCO's Technical Service Department at 800-416-2278.

Notes:

1. *Web height-to-thickness ratio exceeds 200. Web Stiffenners are required at all support points and concentrated loads.*
2. *Web height-to-thickness ratio exceeds 260. Section is not in compliance with AISI S100, so effective properties are not provided.*
3. *Section properties are in accordance with AISI S240.*
4. *Web depth for track sections is equal to the nominal height plus 2 times the design thickness plus the bend radius.*
5. *For deflection calculations, use the effective moment of inertia.*
6. *See page 4 for additional table notes.*

For more information, please contact CEMCO's Technical Service Department at 800-416-2278.
This technical information reflects the most current information available and supersedes any and all previous publications effective February 20, 2024 #VSX-V1-8/2017

Notes:

1. *Web height to thickness ratio (h/t) exceeds 200. Web stiffeners required at all support points and concentrated loads.*
2. *Lateral loads of 5 psf, 7.5 psf, and 10 psf have NOT been reduced for strength or deflection checks. Full lateral load is applied.*
3. *Limiting heights are in accordance with AISI S100 using all steel non-composite design.*
4. *Limiting heights are established by considering flexure (f), web crippling (w) and deflection.*
5. *Allowable moment is the lesser of Mal and Mad. Stud distortional buckling based on an assumed $K\Phi = 0$.*
6. *For bending, studs are assumed to be adequately braced to develop full allowable moment.*
7. *Studs are fully braced when unbraced length is less than Lu. See section properties table for Lu values.*
8. *Web crippling check is based on AISI S100 section C3.4.2 Condition 1: End One-Flange Loading with 1" end bearing.*
9. *See page 4 for additional table notes.*

Notes:

1. *Web height to thickness ratio (h/t) exceeds 200. Web stiffeners required at all support points and concentrated loads.*

2. *Lateral loads of 5 psf, 7.5 psf, and 10 psf have NOT been reduced for strength or deflection checks. Full lateral load is applied.*

3. *Limiting heights are in accordance with AISI S100 using all steel non-composite design.*

4. *Limiting heights are established by considering flexure (f), web crippling (w) and deflection.*

5. *Allowable moment is the lesser of Mal and Mad. Stud distortional buckling based on an assumed $K\Phi = 0$.*

6. *For bending, studs are assumed to be adequately braced to develop full allowable moment.*

7. *Web crippling check is based on AISI S100 section C3.4.2 Condition 1: End One-Flange Loading with 1" end bearing.*

8. *See page 4 for additional table notes.*

For more information, please contact CEMCO's Technical Service Department at 800-416-2278.

Notes:

1. *Web height to thickness ratio (h/t) exceeds 200. Web stiffeners required at all support points and concentrated loads. Viper composite limiting heights are based on testing in accordance with ICC-ES acceptance criteria AC86.*
2. *Limiting heights are established by considering flexure, shear, web crippling, and deflection.*
3. *Mechanical fastening of gypsum panel to the stud and track is required, except when installing a minimum 30 mil slotted track with 2-1/2" legs in lieu of standard track.*
4. *Viper-X composite limiting heights based on a single layer of 5/8" Type X gypsum board applied vertically to both sides of the wall over full height. 5/8" Type X wallboard from the following manufacturers are acceptable: USG, National, Georgia- Pacific, PABCO, CertainTeed, & American.*
5. *See page 4 for additional table notes. For deflection track usage contact Technical Services.*
6. *For GWB installed horizontally, see table for "Non-Composite Limiting Heights- Fully Braced" (see above).*

** h/t > 200, web stiffeners are required at end supports*

Notes:

1. *Ceiling Spans are established by considering flexure, shear, web crippling and deflection.*
2. *For web crippling, when h/t ≤ 200, the web crippling values are computed based on section C3.4.2 of AISI S100.*
3. *All values are for simple spans, with compression flange either unbraced or braced at midspan.*
4. *Ceiling spans are based on total load of assembly, not including storage or live load for accessible ceilings.*
5. *The factory punchouts are in accordance with section C5 of AISI S201. The distance from the center of the last punchout to the end of the stud is 12".*
6. *Web Crippling calculations are based on a bearing length of 1 inch.*
7. *If punchouts occur near supports, members must be checked for reduced shear and web crippling in accordance with AISI S100.*

Notes:

1 Shear values are tested per AISI S100 and S905 procedure.
2. Capacities are based on section E4 of the AISI S100 Specification.
3. Capacities are based on Allowable Strength Design (ASD).
4. Screw pull-out capacities are based on listed head diameter.
5. Two sheets of equal thickness and tensile strength are assumed in tabulated values.
6. When materials of different steel thickness and tensile strength are connected, use the lowest value for shear capacity (tilting and bearing), for pull-out capacity use sheet closest to screw tip and for pull-over capacity use sheet closest to screw head.
7. Where multiple fasteners are used, screws are assumed to have a center-to-center spacing of at least 3 times the nominal diameter.
8. Screws are assumed to have a center-of-screw to edge-of-steel dimension of at least 1.5 times the nominal diameter of the screw.
9. When screws are subjected to combination of shear and tension forces, interaction equation of AISI S100 Specification section E4.5 shall be used.

3-5/8" Viper-X-22	24" on-center	1 layer 5/8" Type X on each side	R-13	RC1-X	53	TL17-373

Notes:

The Viper-X drywall framing system has been tested to determine the transmission of sound through walls. Acoustic tests were performed using 3-5/8" Viper-X steel studs. The tests were performed according to ASTM E 90 in different configurations. May use RC1-X. Sound testing performed by Western Electro-Acoustic Laboratory.

CEMCO STRUCTURAL ENGINEERING

The CEMCO Structural Engineering division provides solutions that make sure your buildings are designed to current codes and specifications. Our methodology helps you control costs and keep your projects on schedule. We work closely with owners, designers, and contractors to facilitate efficient project execution.

The structural engineering division uses state-of-the-art software and technologies to streamline the request, design, and issuance processes to cut costs and save time on your projects.

Let the experienced CEMCO Structural Engineering team add value to your project with the following services:

- Thorough review of your architectural plans to determine structural requirements.
- Member sizing and cost estimation for preliminary and conceptual designs.
- Professional, certified engineering shop drawing and calculations.
- Use our project submittal form to submit your project online.

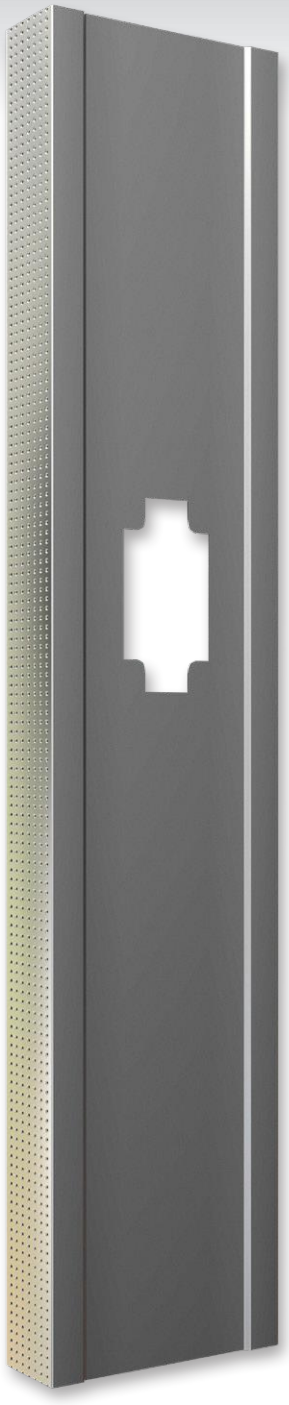
CEMCO STRUCTURAL ENGINEERING 1-2-3 PROCESS

1 Review client structural and architectural plans.

2 Deliver shop drawings and structural solutions based on the client's needs.

3 Provide full engineering support through the life of the project.

Viper-X®



CEMCO warrants to Purchaser only the Products to be free from defects in material and workmanship for a period of one year from the date of delivery, subject to CEMCO's standard manufacturing and commercial variations and practice. CEMCO MAKES NO OTHER REPRESENTATIONS OR WARRANTIES TO PURCHASER REGARDING THE PRODUCTS AND EXPRESSLY DISCLAIMS ALL OTHER IMPLIED OR EXPRESS WARRANTIES, INCLUDING ALL WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. CEMCO's Product Warranty does not apply to any Product to the extent it has been subject to (1) other than normal wear and tear, or (2) improper installation, alteration, modification, or repair, tampering, negligence, abuse or accident, or (3) improper storage. LIABILITY IS LIMITED TO REPAIR OR REPLACEMENT, AT CEMCO'S OPTION, OF ANY DEFECTIVE PRODUCT. CEMCO will repair and replace, at its option, Products which upon inspection it finds to be defective, based on claims made in writing to CEMCO within a reasonable time after discovery. Products alleged to be defective must be returned, freight prepaid, within thirty (30) days to CEMCO with the return authorization number, obtained from CEMCO, clearly marked on the outside of the return container for repair or replacement by CEMCO. THE ABOVE WARRANTY SHALL CONSTITUTE PURCHASER'S EXCLUSIVE REMEDY WITH RESPECT TO THE PRODUCTS FURNISHED HEREUNDER. IN NO EVENT SHALL CEMCO BE LIABLE OR RESPONSIBLE TO PURCHASER OR ANY OTHER PERSON FOR ANY SPECIAL, INDIRECT OR CONSEQUENTIAL LOSSES OR DAMAGES, WHETHER BASED ON CONTRACT, TORT, STRICT LIABILITY OR OTHER THEORY OF LAW, EVEN IF CEMCO SHALL HAVE BEEN ADVISED OF THE POSSIBILITY OF ANY LOSS OR DAMAGES, ALL SUCH DAMAGES AND CLAIMS BEING SPECIFICALLY DISCLAIMED. IN NO EVENT SHALL CEMCO'S LIABILITY EXCEED THE PURCHASE PRICE OF THE PRODUCT.

All transactions shall be governed by the laws of the State of California (including, without limitation, the provisions of the California Commercial Code), without giving affect to any conflict of law rule or principle of such state. The United Nations Convention for the International Sale of Goods shall not apply to this agreement.
