

TRUS JOIST[®] RIM BOARD

Featuring TJ[®] Rim Board and TimberStrand[®] LSL

- Multiple thicknesses, grades, and products to cover all your rim board needs
- 1 $\frac{1}{4}$ " Thickness matches lateral load capacity of 2x nominal sawn lumber in diaphragms
- Limited product warranty

The products in this guide are readily available through our nationwide network of distributors and dealers. For more information on other applications or other Trus Joist® products, contact your Weyerhaeuser representative.

Benefits of Trus Joist® Rim Board

- Longer lengths for faster installation and fewer joints
- Depths are sized to match TJI® joists—less cutting and material waste when used together
- High vertical load transfer capacity
- Recognized and accepted by major building codes

For years, little attention was paid to the importance of lateral forces. However, recent earthquake and hurricane disasters have demonstrated the importance of proper lateral load transfer. Engineering analysis confirms that rim board is essential in a home's ability to resist the lateral loads generated by high winds and earthquakes.

Trus Joist® rim board products offer vertical load support and provide the nailing surface necessary to adequately transfer wind and seismic loads. Manufactured by Weyerhaeuser according to strict quality assurance requirements, they provide strength, stiffness, and durability. We're so confident about the performance of all our rim board that it comes with a limited lifetime product warranty. When used with TJI® joists, it offers the ultimate high performance floor.

Available Sizes

Trus Joist® Product	Depth							
	9½"	11⅞"	14"	16"	18"	20"	22"	24"
1⅞" TJ® Rim Board	•	•	•	•				
1¼" 1.3E TimberStrand® LSL	•	•	•	•	•	•	•	•
1½" 1.3E TimberStrand® LSL	•	•	•	•	•	•	•	•
1¾" 1.55E TimberStrand® LSL	•	•	•	•				
3½" 1.55E TimberStrand® LSL	•	•	•	•				

Some sizes may not be available in your region.

Approximate Material Weights (plf)

Trus Joist® Product	Depth							
	9½"	11⅞"	14"	16"	18"	20"	22"	24"

3½" 1.55E TimberStrand® LSL	10.4	13.0	15.3	17.5				

PRODUCT STORAGE

Protect product from sun and water

CAUTION:
Wrap is slippery when wet or icy

*Align stickers (2x3 or larger)
directly over support blocks*

*Use support blocks (6x6 or larger) at
10' on-center to keep bundles out of
mud and water*

LATERAL LOAD CAPACITY AND 1¼" TIMBERSTRAND® LSL RIM BOARD

Why is lateral load capacity of rim boards important?

Lateral loading on structures is typically from wind or seismic forces, and rim board is an important structural link for resisting those lateral loads. To further explain lateral loads, let's look at a typical home and how the wind loads travel through the building:

Wind force on a wall is resisted by wall sheathing and framing.

Wall is supported at top by roof diaphragm and at bottom by floor diaphragm.

Load in roof and floor diaphragms is transferred to side walls (or braced/shear walls) by rim board, rim joist, or blocking. Connections are essential to transfer load.

Side walls act as shear force collectors. Loads may accumulate from top of house to bottom.

How do lateral capacities of 1¼" TimberStrand® LSL rim board compare to sawn lumber framing?

In floor or roof diaphragms, 1¼" TimberStrand® LSL rim board is capable of transferring the same lateral loads allowed by code for 2" nominal framing members. This equivalency was verified by testing: International Building Code, Case 1, unblocked diaphragm at 240 plf with 2¾" sheathing and 8d (0.131" x 2½") nails at 6" on-center.

RIM BOARD INSTALLATION DETAIL

Rim Board Installation Detail⁽¹⁾⁽²⁾⁽³⁾

Specifications	Prescriptive		Designed ⁽⁴⁾		
	A3	A3.1	A3.2	A3.3	A3.4
Minimum Rim Board Thickness	1½"	1½"	1¼"	1¼"	1¼"
Plate Nail - (0.131" x 3") ⁽⁵⁾	12" o.c. ⁽⁶⁾	12" o.c. ⁽⁶⁾	12" o.c. ⁽⁶⁾	Designed shear wall	
Floor Panel Nail - 8d common (0.131" x 2½") ⁽⁵⁾	6" o.c.	6" o.c.	6" o.c.	4" o.c. minimum	
Rim Board to TJI® Joist—(0.131" x 3")	One into each flange				
Toe Nail—(0.131" x 3")	6" o.c.	6" o.c.	6" o.c.	4" o.c.	By design professional ⁽⁷⁾
TJI® Joist to Plate—(0.113" x 2½")	Two nails driven at an angle into bottom flange, one each side of web at least 1½" from end				
Wall Framing	Per code	Per code	Per code	Designed shear wall	
Lateral Load (plf)	Per code	220 ⁽⁸⁾	240 ⁽⁸⁾	350 ⁽⁸⁾	By design professional ⁽⁷⁾

- All sheathing must be properly blocked and nailed.
- Minimum rim thickness shown allows one row of nails for shear wall and floor panel. For alternate spacing and additional rows of nails for different rim board thicknesses, see TB-206.
- Verify the lateral capacity of the wall. Not all types of code allowed wall construction provide the same lateral resistance. Check with local building officials or the design professional of record.
- Shear wall loading plus floor diaphragm loading cannot exceed lateral capacity listed unless additional connections designed.
- Nailing is based on a 2¾" thick floor panel. For thicker floor panels, nail lengths may need to be increased. Refer to IRC/IBC or design professional.
- Per code, increase nailing to 4" on center for braced walls.
- Capacity of combined toe-nail and lap sheathing connection developed by design professional.
- Lateral load capacities are for seismic design applications. No further increases for duration of load are allowed, except loads may be increased by a factor of 1.4 for wind design applications.

DESIGN PROPERTIES

Allowable Design Stresses⁽¹⁾ (100% Load Duration)

Product / Grade	G Shear Modulus of Elasticity (psi)	E Modulus of Elasticity (psi)	E _{min} Adjusted Modulus of Elasticity ⁽⁴⁾ (psi)	E Cross-Grain Modulus of Elasticity (psi)	F _b Flexural Stress (psi)	F _{c,L} Compression perpendicular to grain ⁽⁶⁾ (psi)	F _{c,} Compression parallel to grain (psi)	F _v Horizontal shear parallel to grain (psi)	SG Equivalent Specific Gravity ⁽⁷⁾	
									Face Grain (psi)	Edge Grain (psi)
1½" TJ® Rim Board ⁽²⁾	—	0.6 x 10 ⁶	305,000	220,000	700	710	—	425	0.32 ⁽⁸⁾	—
1.3E TimberStrand® LSL ⁽³⁾	81,250	1.3 x 10 ⁶	660,750	147,000	1,700 ⁽⁵⁾	710	1,835	425	0.50 ⁽⁹⁾	0.50 ⁽¹⁰⁾
1.55E TimberStrand® LSL	96,875	1.55 x 10 ⁶	787,815	170,000	2,325 ⁽⁵⁾	900	2,170	310	0.50 ⁽⁹⁾	0.50 ⁽¹⁰⁾

- (1) Unless otherwise noted, adjustment to the design stresses for duration of load are permitted in accordance with the applicable code.
- (2) 1½" TJ® Rim Board is recognized as an acceptable rim board material for use in conventional construction. It has a maximum lateral transfer capacity of 220 plf; maximum span is 8 feet.
- (3) 1¼" TimberStrand® LSL rim board is recognized by code as providing the lateral transfer capacity equivalent to 2" nominal Douglas fir-larch or southern pine in horizontal diaphragms.
- (4) Reference modulus of elasticity for beam stability calculations, per NDS®.
- (5) For 12" depth. For other depths, multiply F_b by the appropriate factor as follows:
– For TimberStrand® LSL, multiply by $\left[\frac{12}{d}\right]^{0.092}$
- (6) F_{c,L} must not be increased for duration of load.

- (7) For lateral connection design only.
- (8) Specific Gravity of 0.50 may be used for nails, screws and bolts installed perpendicular to face and loaded perpendicular to grain.
- (9) Specific Gravity of 0.58 may be used for bolts installed perpendicular to face and loaded perpendicular to grain.
- (10) For nails and screws only.

For applications not covered in this brochure, use ForteWEB® software or contact your Weyerhaeuser representative.

NAILING ON NARROW FACE

Nails Installed on the Narrow Face

Product	Closest On-Center Spacing Per Row ⁽¹⁾			
	Nail Size			
	8d (0.113" x 2½"), 8d (0.131" x 2½"), 10d (0.128" x 3"), 12d (0.128" x 3¼"), 10d (0.148" x 3")	12d (0.148" x 3¼"), 16d (0.135" x 3½"), 16d (0.148" x 3¼")	16d (0.162" x 3½")	(0.131" x 3" - 3½")
1½" TJ® Rim Board	6"	12" ⁽²⁾	16" ⁽³⁾	12" ⁽⁴⁾
1¼" 1.3E TimberStrand® LSL	4"	4"	6" ⁽⁴⁾	4"
1½" 1.3E TimberStrand® LSL	3"	3"	6" ⁽⁴⁾	3"
1¼" and 3½" 1.55E TimberStrand® LSL	3"	3"	6" ⁽⁵⁾	3"

- (1) To minimize splitting, maintain edge distance and row spacing of 2½ x nail diameter or ¾", whichever is greater. Multiple rows must be staggered and equally spaced from the centerline of the narrow face axis.
- (2) Can be reduced to 5" on-center with maximum nail penetration of 1¼" into the narrow edge (for example, nails that connect the sole plate above to the block or rim).
- (3) Can be reduced to 8" on-center with maximum nail penetration of 1¼" into the narrow edge (for example, nails that connect the sole plate above to the block or rim).
- (4) Can be reduced to 4" on-center with maximum nail penetration of 1¼" into the narrow edge (for example, nails that connect the sole plate above to the block or rim).
- (5) Can be reduced to 3½" on-center with maximum nail penetration of 1¼" into the narrow edge (for example, nails that connect the sole plate above to the block or rim).

ALLOWABLE HOLES

Minimum distance from end of rim:
2x diameter (D) for round holes,
3x length (L) for rectangular holes

General Notes

- Permissible Hole Sizes:
 - Round hole with diameter not exceeding 2/3 rim board depth, centered vertically.
 - Square or rectangular hole with the largest dimension not exceeding 2/3 rim board depth, centered vertically.
 - 14" long rectangular hole with minimum 3½" clearance from the top edge and 2" from the bottom edge.
- The horizontal distance between the edges of adjacent round holes must be at least twice the diameter of the largest adjacent round hole, and three times the length of the largest adjacent rectangular hole.
- The horizontal distance between the end of the rim and the edge of the hole must be at least twice the diameter for a round hole and three times the hole length for a rectangular hole.
- Do not over cut rectangular holes.
- Maintain at least 1" from the edge of a floor joist.
- Do not locate holes under concentrated loads or where rim is used as a header that clear spans more than 24".

EXTERIOR DECK ATTACHMENT

Shimmed Deck Attachment

Ledger Fastener⁽¹⁾ Capacities

Product	Fastener Allowable Load ⁽²⁾ (lbs/bolt)		
	½" Lag Bolt	½" Through Bolt	½" Through Bolt with Air Space
1½" TJ® Rim Board	480	695	615 ⁽³⁾
1¼" 1.3E TimberStrand® LSL	610	725	
1½" 1.3E TimberStrand® LSL	675		
1¼" and 3½" 1.55E TimberStrand® LSL	725		

- (1) Corrosion-resistant fasteners required for wet-service applications.
 (2) Allowable load determined in accordance with ASTM D7672.
 (3) Maximum ½" shimmed airspace.

General Notes

- Maintain 2" distance (minimum) from edge of ledger to edge of fastener. Stagger bolts.
- Local building codes may require through bolts with washers.
- Lateral restraining connections may be required. Refer to 2021 IRC R507.9.2 and the WIJMA deck connection details.

Trus Joist® rim board products are intended for dry-use applications

HEADER APPLICATION

*Support TJ® joists from rim board header with face mount hangers only. For 1-ply header applications, reduce hanger capacities according to hanger manufacturer's recommendations.
 Clinch nails when possible.*

ALLOWABLE VERTICAL LOADS

Vertical Load Transfer at Bearing⁽¹⁾

Product	Uniform Load (PLF)								Concentrated Load (lb)
	Depth								Depth
	9½"	11½"	14"	16"	18"	20"	22"	24"	All
1½" TJ® Rim Board	4,860 ⁽²⁾			NA ⁽³⁾					4,150 ⁽³⁾
1¼" 1.3E TimberStrand® LSL	5,400 ⁽²⁾		5,000	4,340	3,700	3,160	2,710	3,760	
1½" 1.3E TimberStrand® LSL	6,480 ⁽²⁾			6,380	5,740	5,070	4,440	4,520	
1¼" 1.55E TimberStrand® LSL ⁽⁴⁾	7,560 ⁽²⁾			NA					7,470

- (1) Values may not be increased for duration of load.
 (2) Capacity is limited to a maximum of 360 psi per ASTM D7672.
 (3) 1½" TJ® Rim Board is limited to a depth of 16" or less.
 (4) For 2-ply 1¼" or a single 3½" member, values may be doubled.

General Notes

- 1¼" and 3½" TimberStrand® LSL is beam material and may be used as rim board.

	Live Load							67	129	207

(1) Values may be doubled for 3 1/2" 1.55E TimberStrand® LSL.

* Indicates **Total Load** value controls.

How to Use This Table

1. Calculate total load (neglect header weight) on the header in pounds per linear foot (plf).
2. Select appropriate **Span** (center-to-center of bearing).
3. Scan horizontally to find the proper width and depth with a capacity that exceeds actual total load.
4. Verify that adequate bearing length exists.

General Notes

- Table is based on:
 - Uniform loads (header weight considered).
 - Simple span only.
 - Deflection of L/360 live load and L/240 total load.
 - Minimum end bearing of 4 1/2".
- Verify hanger capacities with selected rim board thicknesses. Capacity reductions may be required. Refer to hanger manufacturer for appropriate reductions.
- For loading conditions not shown, use ForteWEB® software or contact your Weyerhaeuser representative.

MULTIPLE-MEMBER CONNECTIONS FOR 2-PLY RIM BOARD

Fastener Installation Requirements⁽¹⁾⁽²⁾

Loading Condition	Ply Width	Fastener Requirements			On-Center Spacing	Maximum Uniform Load Applied to Either Outside Member (plf)
		Nail Type ⁽³⁾	Placement	# Rows		
Top	1½", 1¼", 1½"	8d or 10d	One face	3 ⁽⁴⁾	12"	—
	1¼"	10d		3 ⁽⁴⁾		—
Side	1½", 1¼", 1½"	8d	One face	2		290
	1½", 1¼", 1½", 1¾"	10d		3		430
				2		370
				3		560

(1) For connection of two 3½"-wide plies, see Weyerhaeuser's *Trus Joist® Beam, Header and Column Specifier's Guide*, TJ-9000 (or TJ-9020 for the Pacific Coast and Northwest).

(2) Clinch nails when possible.

(3) 8d nails are 0.113" diameter by 2½" long; 10d nails are 0.128"-0.131" diameter by 3" long.

(4) An additional row of nails is required with depths of 14" or greater.

WE CAN HELP YOU BUILD SMARTER

You want to build solid and durable structures—we want to help. Weyerhaeuser provides high-quality building products and unparalleled technical and field assistance to support you and your project from start to finish.

Floors and Roofs: Start with the best framing components in the industry: our Trus Joist® TJI® joists; TimberStrand® LSL rim board; and TimberStrand® LSL, Microllam® LVL, and Parallam® PSL headers and beams. Pull them all together with our self-gapping and self-draining Weyerhaeuser Edge Gold™ floor panels and durable Weyerhaeuser roof sheathing.

Walls: Get the best value out of your framing package—use TimberStrand® LSL studs for tall walls, kitchens, and bathrooms, and our traditional, solid-sawn lumber everywhere else. Cut down installation time by using TimberStrand® LSL headers for doors and windows, and Weyerhaeuser wall sheathing with its handy two-way nail lines.

Software Solutions: Whether you are a design professional or lumber dealer, Weyerhaeuser offers an array of software packages to help you specify individual framing members, create cut lists, manage inventories—even help you design a complete structural frame. Contact your Weyerhaeuser representative to find out how to get the software you need.

Technical Support: Need technical help? Weyerhaeuser has one of the largest networks of engineers and sales representatives in the business. Call us for help, and a skilled member from our team of experts will answer your questions and work with you to develop solutions that meet all your structural framing needs.

LIMITED LIFETIME PRODUCT WARRANTY

Weyerhaeuser provides a limited warranty for the expected life of the structure for all Trus Joist® branded products. Product information, installation instructions, and the full text of each product's limited warranty (including limitations and exclusions) are available on the Weyerhaeuser website, from your Weyerhaeuser representative, or by calling toll free: 888-453-8358.

Additionally, Weyerhaeuser offers limited warranties on a broad variety of its other products. To see complete details of all Weyerhaeuser product warranties, visit weyerhaeuser.com/woodproducts/warranty.
