PVC

polyvinyl chloride Built to withstand the test of time, our PVC roofing membranes are made to resist the toughest weather conditions and chemicals. JM PVC with Dow Elvaloy® KEE and JM PVC SD Plus thermoplastic roofing membranes are manufactured using an ultraviolet-resistant polyvinyl chloride. Utilizing a polyester fabric reinforcement allows for systems to be both mechanically attached and adhered. PVC membranes deliver a pliable and durable sheet with excellent weathering characteristics and resistance to harsh chemicals and industrial pollutants.

Single Ply

JM PVC

with Dow™ Elvaloy® KEE Polymer

JM PVC with the optimal amount of Dow™ Elvaloy® KEE is a heat-weldable polyvinyl chloride thermoplastic membrane that provides superior resistance against oil, fuels and other hard chemicals.

TPO

thermoplastic polyolefin Our JM TPO roofing systems give you the option of a reliable, cost-effective roofing solution. We reinforce our membranes with a polyester fabric and manufacture them using an ultraviolet-resistant thermoplastic polyolefin formulation. We developed our TPO formulation to allow for extreme pliability, flexibility and weldability during the installation.

EPDM

ethylene propylene diene monomer With superior durability and flexibility, EPDM is a smart roofing solution. Our EPDM production facility is one of the world's most technologically advanced, allowing us to extrude our sheets instead of using the traditional calendaring process. Our EPDM is manufactured thicker with a more uniform surface finish. This advancement in manufacturing cleaner sheets requires less preparation to ensure a stronger bond during installation. The curing of EPDM is referring to the vulcanization of the product. All of our sheets and many of our accessories are fully cured. Some flashing tapes, pre-molded pipe boots and corners are partially cured or uncured. This gives the flashing materials greater flexibility and adhesion when using them in the field.

ISO & COVER BOARDS

Our broad line of polyiso insulation products can address your R-value requirements. We are a PIMA member and are audited by their QualityMark program. We have a wide range of facers that cover all ASTM Type II designations, and we offer a full line of composite products. Adding a cover board enhances the long-term performance of a commercial roofing system. We offer high-density polyiso, low-density polyiso, cement and gypsum cover boards. We've got you covered with solutions for all situations you might encounter: a system for high-impact zones, fire-retardant solutions that meet UL Class A requirements, products that do not support mold growth and more.
