NOTES

- Allowable loads have not been increased for wind or seismic.
- Attachment of WSC clip to main structure should be engineered by a design professional for steel or concrete base materials.
- Allowable loads are based on attachment to main structure through pilot holes with #10-24 cap screws with a head diameter of 0.29".
- Safety factor, Ω , determined in accordance with the provision of section F1.2 of the NASPEC with statistical data specified in AC261 and from test data.
- The serviceability limit of 1/8" deflection between the stud and supporting structure did not govern in testing.
- Eccentric tension and compression values represent clip capacity after structure deflects +/- 1-1/2" up or down from center of the clip.

CODES & STANDARDS

- Steel meets ASTM A1003
- Coating meets ASTM A1003, A653
- ICC ES ESR-3578
