FIBERGLAS™ 700 SERIES BOARD TYPES 703 AND 705 FIBERGLASS INSULATION

Types 703 and 705 Series Insulation Boards are made of inorganic glass fibers with a thermosetting resin binder and formed into semi-rigid or rigid rectangular boards. Types 703 and 705 are available with factory-applied FRK or poly-encapsulated ASJ Max facings. Both facings are vapor retarders and provide a neat, finished appearance in mechanical applications.

Features

- Save and reduce heat transfer, lowering operating costs
- FRK facing is an aluminum foil jacket exterior with fiberglass reinforcement over a rigid kraft paper which is cleanable and doesn't support mold or mildew growth[1]
- ASJ Max is an all-service jacket with a polymer-film exterior surface that is smooth, durable, cleanable, wrinkle-resistant, resists water staining, and doesn't support mold or mildew growth[1]
- The ASJ Max facing can resist short durations of liquid water exposure that can occur during construction
- Resists damage and maintains structural integrity and efficiency
- Efficiently reduces sound transmission
- 703 and 705 are lightweight, resilient, and easy to handle and fabricate on the job site

1 ASJ Max jacket does not support mold growth when tested in accordance with ASTM C1338.

Standards, Codes Compliance

- ASTM C612, Mineral Fiber Block & Board Thermal Insulation, Types IA, IB — Types 703 and 705
- ASTM C795, Thermal Insulation for Use Over Austenitic Stainless Steel[2]
- ASTM C1136, Flexible Low Permeance Vapor Retarders for Thermal Insulation, Type I: ASJ Max; Type II: FRK
- Nuclear Regulatory Commission Guide 1.36, Non-Metallic Thermal Insulation

2 Preproduction qualification testing complete and on file. Chemical analysis of each production lot required for total conformance. Certification needs to be specified at time of order.

Applications

- Type 703 — Semi-rigid boards for use on mechanical equipment and air conditioning ductwork, and walls and ceilings
- Type 705 — A high-strength rigid board for use on chillers, other mechanical equipment, walls and ceilings, and heating and air conditioning ductwork, where high-abuse resistance and good, finished appearance is important

The above table provides approximate heat loss values (HL), Btu/hr•ft², and surface temperatures (ST), °F, for flat surfaces. Values are based on horizontal heat flow, vertical flat surface, 80°F ambient temperature, still air, and ASJ Max facing. To convert heat loss values to W/m2, multiply values by 3.15. To convert surface temperatures, use the formula: °C = (°F-32)/1.8. For similar information using other assumptions, contact your Owens Corning representative.
