4150 Copper Fabric Flashing

WIRE-BOND

Note: A Termination Bar is required for surface-mounted applications.

Description: Copper Fabric Flashing

- Highest quality laminated copper flashing.
- Two layers of dense glass fabric and special blended asphalt are laminated to copper core to produce greater tensile strength and improved puncture resistance.
- Composition of copper, glass fabric and asphalt will ensure a permanent bond in the mortar joint and protection from moisture.

Use Wire Bond Flashing Mastic to seal all laps and joints.

Copper Flashing is used in masonry construction because it does not react to any alkali or acids that may be found in mortar.

Copper sheet used in the fabrication of copper laminates conforms to ASTM B370 (110 Alloy)

The asphalt-saturated glass fabric adds protection to the copper during shipment, and also adds another layer of waterproofing and chemical resistance.

Light, flexible, and rigid enough to maintain its shape when formed by hand on the job.
